The USA Formula

To make money anywhere in the world, first you have to have the right tools and then you have to learn how to use them.

In the USA you not only hold the biggest horse racing events in the world, run the highest quality tracks, and breed elite racing stallions, you also have very advances racing sites.

Now you have “The USA Formula” to combine with all the above, we recommend using www.drf.com the US dedicated and up to the second live website that is going to allow you to put it all together.

By using the same formula you have just read about in The WHRF e-book, all you now need do is to familiarize yourself with the drf site.

“OK Guy’s Let’s GO”

The USA Formula is much simpler to use than the WHRF except for your timing, so let’s get that sorted right away.

You will still have to find out for yourself the time difference (in seconds) that you will have to allow for to place the right amount of money at your tote, in enough time before the horse leaves the gate.

Example: From checking the “MTP” time at the track on the www.drf.com site just before you decide on which two favorites to put your money, this will depend on some (but not all) of the following.

The Tote you use to wager, or your bookie; your computer download speed or maybe even the program you are running, and also the state you are in will change your timing.

Ok, here’s the 2 sites you can use to work with the same info on all the races in the USA.

First site is DRF at http://www.drf.com

On this site, you just have to click on tools and select live odds in the top menu.
This link will bring you to all the races and the tracks in the USA.

The MTP will tell you in minutes how much time this race starts.
Now, you select your track that you want to see the odds and click on the “View Odds Horizontal”.

This will bring you to this screen:

![Screen Image]

This is the screen you will work with.

You just look at the MTP number and when this number reach 1 or 0, it means that you have less than 1 minutes to place your stakes. This is where you will have to check the timing first with the sportsbook you will use.

Some close the track 2 minutes before the race (MTP 2) and some just a couple of seconds before the race.

For sure, the best thing would be to place the stakes on your horses 30 seconds before the race starts. This is where we will hit the (take out) more winners.

The horse you will place your stakes on are the 2 horses with the second and third highest number’s on the WIN. Not the ODDS. The WIN. This is very important. We don’t care about the odds here, we want the second and third horses with the highest number of stake for a WIN.
In our case, it is horse 7 and 9.

This is as simple as that. Use the sportsbook of your choice and use the system as described in the main ebook with these specific tools for the USA market.

Another great tools for the USA market is the youbet site that you can find at http://www.youbet.com

Here, you will be able to find the same numbers as the drf site but they don’t cover all the races as drf do.

However, you will be able to get the same numbers and watch the races live on your PC like we do for the skyracing channel in Australia.

First, go to their website at http://www.youbet.com and click on Live Horse Racing on the left side menu.
This link will bring you to this page:

As you can see, you just have to select the track on the left side menu and click on it. You will automatically be taken to the odds and numbers and you will see the live coverage of this race on the right of your screen.

Note that you can watch 30 minutes of live races everyday for free but if you are from the USA, you can register with them and watch unlimited races for a low price of $39 a month. This is a very good deal!

Also, if you are from the USA, you can wager with them just like we do with the tarbcorp. So, you bet with them or at your own sportsbook. It is up to you.

If you aren’t from the USA, you cannot register with this site. You can only use their free 30 minutes live races a day.
**How to use the DRF site only**

Ok, what I personally do when I bet on the USA races is simple. This is my personal routine.

I simply use the drf site. I look for the next race that starts in at least 3 minutes. Of course this race must be available at my sportsbook.

Then I select this race and I watch the number of WIN change. When the MTP show 0 for this race, I select the 2 horses with the highest numbers on WIN. I place my stakes on these horses at my sportsbook at the fixed odds they offer.

Next, on the same drf page, I click on results on the right and I wait to see the results from this race. I never place a bet until I know the results of my last race.

When the results come in, I follow the formula and start placing my next stakes on the next race.

Of course, it could take a couple of minutes to see the results. So, that is why when I can watch the race live at youbet.com, I know the results very fast just like we do at the skychannel. This way I can start to place my next stakes sooner.

So, this is basically how it works for the USA market.

Of course, you have to read the main ebook to know how the formula works. THIS IS VERY IMPORTANT.

You just have to use the great resources you have in the USA and you will achieve success.

Also, we will never stress enough the fact that...

PLEASE, TRY THE SYSTEM ON PAPER FIRST! This is what will make the difference between a winning punter and a losing punter. With this formula, you will make money over the long run but you have to use the system right and follow the rules to the letter.

If you do it, you won’t believe how much money you will make and all the fun you will experience.

So that’s it. I wish you an happy and lucrative punting!

Frank and Stephen
Here’s some sportsbooks that will accept players from USA and that offer horse racing

Youbet.com
Betus.com
Sportsinteraction.com
Bookmaker.com
Betjamaica.com
Diamondsportsbook.com
Legends.com
5dimes.com
Bodog.ca
Betonline.com
Sportbet.com
And many others!
